

Join the National Solar Tour

Shine a light on solar
at your school

OCTOBER 1-11, 2020

Does your school have an onsite solar energy system?

Invite your community to learn about clean energy by hosting an open house during the National Solar Tour!

Showcase your clean energy leadership in your community and beyond

Hosting a solar open house is an easy and fun way to engage and educate students, parents, community members, and neighboring school districts about the benefits of clean energy for everyone. The tour provides an opportunity for you to share how onsite solar helps your school save money, protect the climate, and enhance STEM and vocational education.

Generation180 will provide you with the support and resources you need to host the event.

For more information visit GoSolarSchools.org or email solarschools@generation180.org

About the National Solar Tour

The National Solar Tour celebrates the vital role schools play in creating a brighter future for everyone. Generation180 is partnering with Solar United Neighbors and American Solar Energy Society for the 25th anniversary of the National Solar Tour. Last year, over 1,000 schools, homes, businesses, municipalities, places of worship, and community solar gardens opened their doors to the community to celebrate and learn about solar. Tour attendees will be able to talk with hosts about how to go solar and learn about various clean energy technologies, including solar power, energy efficiency, electric vehicles.
